Goal:

The goal is to create a News Feed webapp which gives a user regularly-updated news from the internet related to a particular topic, person, or location.

Description:

A News Application developed with Reactjs using NewsAPI.org. It is a responsive website which is designed to be supported on any device and it is developed considering the Google's concepts of Progressive Web Applications.

A web app (single page application) created with react.js, redux and react-bootstrap using free news api.

This web application involves building a simple news application which fetches news articles from an external api vendor(newsapi.org) in a JSON format, parse the JSON data and display them to the user in web application

Note:

This website is not work if we host It, as the NewsAPI.org is no more free in hosted websites.

It will only be available in localhost. It can still can be downloaded and used in localhost. (Development mode).
